## BOOK SYNOPSIS

In *Fertilizers, Pills, and Magnetic Strips*, Gene V Glass analyzes how a few key technological inventions changed culture in America and how public education has changed as a result. Driving these changes are material self-interest and the desire for comfort and security, both of which have transformed American culture into a hyper-consuming, xenophobic society that is systematically degrading public education. Glass shows how the central education policy debates at the start of the 21st century (vouchers, charter schools, tax credits, high-stakes testing, bilingual education) are actually about two underlying issues: how can the costs of public education be cut, and how can the education of the white middle-class be "quasi-privatized" at public expense? Working from the demographic realities of the past thirty years, he projects a challenging and disturbing future for public education in America. *Fertilizers, Pills, and Magnetic Strips* is attracting the attention of the nations foremost education scholars.
